## **Bureau Overview**

The Bureau of Alcohol and Drug Abuse (BADA) is one of seven bureaus located within the Nevada State Health Division, a division of the Human Resources Department. It is the designated Single State Agency for the purpose of applying for and expending the federal Substance Abuse Prevention and Treatment Block Grant issued through the Substance Abuse and Mental Health Services Administration (SAMHSA). The Bureau has an office at 505 East King Street, Room 500 in Carson City and an office located at 1830 East Sahara Avenue, Suite 314 in Las Vegas. The Bureau does not provide direct substance abuse prevention or treatment services. It provides funding via a competitive process to non-profit and governmental organizations throughout Nevada. The Bureau plans and coordinates statewide substance abuse service delivery and provides technical assistance to programs and other state agencies to ensure that resources are used in a manner which best serves the citizens of Nevada.

In accordance with NRS 458.025, the functions of BADA include:

1. Statewide formulation and implementation of a state plan for prevention, treatment, and rehabilitation of substance abuse
2. Statewide coordination and implementation of all state and federal funding for alcohol and drug abuse programs
3. Statewide development and publication of standards for certification and the authority to certify facilities and programs

The Bureau provides regulatory oversight and funding for community-based organizations. BADA funds prevention programs to reduce and prevent substance abuse statewide. Subgrantees are funded to provide one or more of the six prevention strategies that are promoted by the Center for Substance Abuse Prevention (CSAP). The six strategies include: information dissemination, prevention education, alternative activities, problem identification and referral, community base processes, and environmental strategies. Prevention is a process that prepares and supports individuals and communities in the creation and reinforcement of healthy behaviors and lifestyles.

The Bureau currently fund organizations statewide to provide intervention, outpatient, intensive outpatient, residential, transitional housing, and detoxification services for adolescents and adults, as well as opioid maintenance treatment for adults.

The Bureau works closely with funded providers through the BADA Advisory Committee. This Advisory Committee is made up of funded prevention and treatment providers and meets bi-monthly. It serves in an advisory capacity to the State Health Division Administrator and the BADA Chief. In 2000-01, the Bureau worked closely with the

**Bureau  
Overview  
Continued**

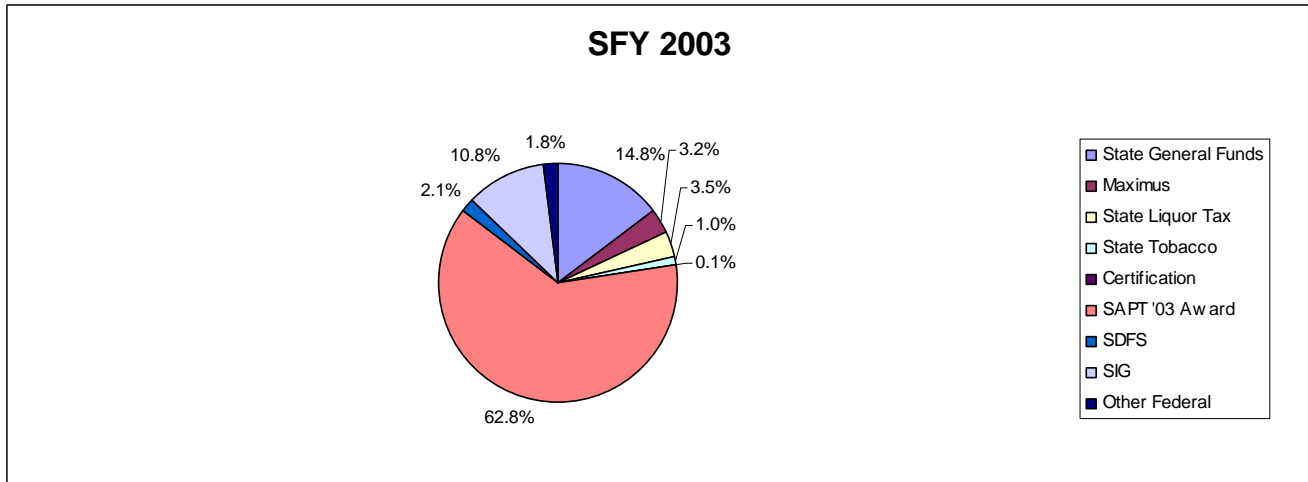

Advisory Committee to develop a comprehensive strategic plan. This plan actually consists of seven strategic plans covering the following topics:

- Substance Abuse Treatment
- Substance Abuse Prevention
- Evaluation
- Special Populations:
  - Adolescents
  - TB and HIV/AIDS Services
  - Injecting Drug Users
  - Pregnant and Parenting Women

In order to best serve the citizens of Nevada, Bureau staff has been organized into five teams. These teams are:

- The Data Planning and Evaluation team, which performs planning and evaluation functions and collects and reports data as required by SAMHSA.
- The Fiscal team which performs all financial functions.
- The Prevention team which provides oversight and technical assistance to Nevada's prevention program providers
- The Treatment team which provides oversight and technical assistance to Nevada's treatment providers
- The Support team which performs functions for the other teams and the Bureau in general

## Treatment Overview

BADA is the designated Single State Agency (SSA) for the purpose of applying for and expending the Federal Substance Abuse Prevention and Treatment (SAPT) Block Grant issued through the Substance Abuse and Mental Health Services Administration (SAMHSA). However, the Bureau does not provide direct substance abuse prevention or treatment services. The Bureau plans and coordinates statewide substance abuse service delivery and provides technical assistance to programs and other state agencies to ensure that resources are used in the most effective and efficient manner.

The Bureau ensures service delivery throughout the State via a Performance Grant process. Performance grants require providers to meet negotiated scopes of work in order to receive reimbursement for expenses authorized under the subgrant. Quality as well as quantity criteria must be met. Only providers that are certified by Bureau staff may receive funding.

All Bureau funded providers must be in full compliance with state and federal regulations and laws governing substance abuse treatment programs. In addition, the Bureau, working with the BADA Advisory Committee has created “Substance Abuse Treatment Program Operating and Access Standards”. The Program Operating and Access Standards are a progressive set of standards that will encourage Nevada substance abuse treatment providers to fully implement the American Society of Addiction Medicine Patient Placement Criteria second revision (ASAM PPC-2R)<sup>1</sup>, adopt the National Institute of Drug Abuse’s (NIDA) 13 Principles of Effective Treatment<sup>2</sup>, and establish substance abuse treatment centers of excellence throughout Nevada. Although this document requires compliance with various standards progressively over time, below are some of the standards that must be met by all Bureau funded providers as of November 2002.

- **Availability** - No one is denied services based on ability to pay. The organization uses ASAM PPC-2R to facilitate an appropriate match between the needs of people served and the level of care. Formal efforts are made to provide immediate access to treatment or when not available, interim services are provided.
- **Assessment** - Providers are able to assess drug and alcohol history, presence of co-occurring substance abuse and mental health disorders, psychosocial history, cultural and language needs, socioeconomic factors, eligibility for public health assistance, economic assistance, employment readiness, education assistance, housing and/or living needs, and detoxification status.
- **Treatment** - Providers recognize client’s treatment needs are shaped by such elements as age, race, culture, sexual orientation, gender, pregnancy, housing and employment, as well as physical and sexual abuse and directly or indirectly factors these needs into the treatment matching activity. Providers give admission priority

## Treatment Overview Continued

- to pregnant women, and provide counseling and education regarding HIV/TB, risks of sharing needles, and risks of sexual behavior while under the influence of mood altering drugs.
- **Clinical Case Management** - Clinical and case management services are provided to all clients to integrate counseling and other needed social services into the client's treatment plan/service delivery. The provider offers or makes referrals for follow-up services including relapse prevention services, childcare is made available for priority populations, prenatal care is made available, and continued care incorporates an understanding of self-help groups and attendance is encouraged.

## Treatment Accomp- lishments

- Twenty-four non-profit private or governmental substance abuse treatment programs providing services in 51 sites in 30 towns and cities were funded in state fiscal year 2003. Programs received approximately \$12.2 million for the current state fiscal year. Additionally, BADA certified another 66 treatment programs that were not funded.
- All funded programs must not discriminate based on ability to pay, race/ethnicity, gender or disability. Additionally, programs are required to provide services utilizing a sliding fee scale that must meet minimum standards.
- Providing a continuum of treatment services, BADA continued to support various treatment levels of care for adolescents and adults including: Early Intervention, Comprehensive Evaluations (for co-occurring substance abuse and mental health disorders), Detoxification (social model and modified medical), Residential, Intensive Outpatient, Outpatient (individual and group counseling), and Transitional Housing (which requires outpatient services).
- Admission statistics for 2002 indicate that 10,724 underserved individuals were admitted to publicly supported treatment programs throughout Nevada. Supported services and admissions included the following: 2,570 detoxification admissions, 2,674 residential treatment admissions, and 5,480 outpatient admissions.
- In accordance with the 2000 Bureau Strategic Plan, BADA and its clinical partners developed a standardized "Program Operating and Procedures Standards" that were been incorporated into the 2003 – 2006 Request for Application.
- Further progress in the adoption of evidence/science-based programming included participation in the state's Practice Improvement Collaborative and training provided at Nevada's Annual Summer Institute for Addiction and Prevention Studies. In addition, approximately 90 other courses and 50 hours of statewide training including the application of the American Society of Addiction Medicine (ASAM) placement criteria were held. The next major initiative is to train on the NIDA's 13 Principles.

**Treatment  
Accomplishments  
Continued**

- BADA continues to promote performance-based treatment and measurable outcomes by defining treatment measurements contained within all its subgrant documents.
- In 2002, 97.7 percent of clients admitted to treatment that completed their programs reported great, good, or fair improvement.

BADA implemented statewide standards regarding access to TB and HIV testing and counseling for clients in treatment working through the Clark County Health District, the Health Division's Bureau of Community Health, and the Washoe County District Health Department.

- All funded programs were monitored by assigned program analysts to ensure program and fiscal accountability at least once during the past year. This is in addition to program certification, which can be for up to two years. BADA offered training to its providers to ensure compliance with Health Insurance Portability and Accountability Act (HIPAA) standards concerning privacy and security.
- BADA continues to encourage the development of a continuum of services across the state. Additionally, treatment services for priority populations, including adolescents, remain a priority, as are services for pregnant and parenting women and care coordination activities. The number of adolescent treatment admissions during the past four years increased by 46 percent over those for 1999.

**Need for  
Treatment**

**Treatment Needs**

The Bureau of Drug and Alcohol Abuse has a number of resources available to determine unmet treatment needs in Nevada. Data from these sources is presented below.

**The SAMHSA National Household Survey on Drug Abuse**

The Substance Abuse and Mental Health Administration (SAMHSA) conducts a yearly National Household Survey on Drug Abuse (NHSDA). SAMHSA administers questionnaires to a representative sample of the population through face-to-face interviews at their place of residence. The survey covers residents of households, noninstitutional group quarters (e.g., shelters, rooming houses, dormitories), and civilians living on military bases. Persons excluded from the survey include homeless people who do not use shelters, active military personnel, and residents of institutional group quarters, such as jails and hospitals. Over 800 surveys were conducted of residents 12 years of age or older in Nevada.

Pooled data from the 1999 and 2000 surveys in estimate (all ages 12 and greater) the past month use of alcohol, tobacco, and marijuana is 52.62 %, 33.78% and 5.31%. The corresponding national figures for the past month use of these substances are 46.25%, 25.32%, and 4.8% respectively. The past year cocaine use for Nevada residents 12 years

## Need for Treatment Continued

old or older is estimated at 2.14% (the national average is 1.64%). Additional survey results are bulleted below.

- 7.5% of Nevada residents were estimated to have used illicit drugs in the past 30 days. This translates to about 114,000 individuals.
- 3.2% of Nevada residents were estimated to have used some illicit drug other than marijuana in the past 30 days. This translates to about 49,000 individuals.
- It is estimated that 9.11% of Nevada's youth from 12 to 17 years of age have an alcohol or drug substance dependence or abuse problem. This translates to 17,199 individuals.
- It is estimated that 6.84% of Nevada's total population have an alcohol or drug substance dependence or abuse problem. This translates to 156,838 individuals.

## Clients in Treatment

The Bureau's Client Data System collects extensive information on clients admitted for treatment. Demographics, referral sources, utilization of treatment programs, reporting of capacity at or over 90%, waiting lists, discharge information, and the number of individuals waiting for treatment is also collected. The Bureau also collects information from funded providers on utilization, capacity, and the number of clients waiting for treatment admission. Treatment admission data for CY 2002 is as follows<sup>1</sup>:

- There were 10,724 admissions to BADA funded treatment programs in 2002
- 2,570 of the 10,724 admissions were for detox services
- 1,456 adolescents were admitted for treatment in 2002
- Adolescent admissions have increased 46% in the last four years
- Adult admissions by primary substance abuse were: 43% for alcohol abuse, 27% for methamphetamine abuse, 8% for marijuana/hashish, 8% crack abuse, and others 14%
- Adolescent admissions by primary substance abuse were: 20% for alcohol abuse, 18% for methamphetamine abuse, 55% for marijuana/hashish, 1% crack abuse, and others 6%
- 48% of the adult population served was in outpatient care, 14% in short-term residential treatment, 11% in long-term residential treatment, and <1% in day treatment
- 61% of the adolescent population served was in outpatient care, 1% in short-term residential treatment, 20% in long-term residential treatment, and 10% in day treatment
- 65% served were male and 35% females, 6% were pregnant at admission
- Most frequent referrals were from the criminal justice system 43%, and by self, family or friends 33%, the balance was from health or community services
- 

---

<sup>1</sup> Bureau of Alcohol and Drug Abuse, Nevada Department of Human Services. Client Data System Reports (through November 2002),

## Clients in Treatment Continued

- 1,350 clients were placed on waiting lists in calendar year 2002. Of these, 216 were either pregnant injection drug users (IDU), pregnant women, or IDU men and women (as priority populations these clients receive support services in the interim)
- In 2001, 8,561 people were arrested for drug related crimes and 15,554 were arrested for alcohol related crimes in Nevada.
- The YRBS reports that 54% of high school students in Nevada used Marijuana one or more times in their lives, 27% used marijuana one or more times during the past 30 days. The national average for these values are 42% and 24% respectively.<sup>1</sup>
- For two consecutive years, (2000 to 2001) the United Health Foundation has ranked Nevada 49<sup>th</sup> in the nation for prevalence of smoking (adult and youth), only to be surpassed by Kentucky.
- In 2000 there were 162 fatal crashes involving alcohol or drugs and 480 drug or alcohol related deaths in Nevada.

## Co-Occurring Disorders

### Co-Occurring Disorders

The past two decades have witnessed the emergence of an increasing number of individuals with co-occurring mental health and addictive disorders. These individuals typically do not fare well in traditional service settings, and their course of illness is often associated with poor outcomes across multiple service systems at higher cost and higher levels of service utilization. National epidemiological data demonstrate clearly that the prevalence of these individuals is sufficiently high and that co-morbidity must be considered an expectation, not an exception. The U.S. Surgeon General reports "Forty-one to sixty-five percent of individuals with a lifetime substance abuse disorder also have a lifetime history of at least one mental disorder, and about fifty-one percent of those with one or more lifetime mental disorders also have a lifetime history of at least one substance abuse disorder." These individuals appear not only in mental health and substance abuse treatment settings, but also in primary health care, correctional, homeless, protective service, and other social service settings.

The stigma that still is associated with substance abuse disorders and mental disorders stands between many people with co-occurring disorders and successful treatment and recovery. Individuals with co-occurring disorders present a challenge to both clinicians and the treatment delivery system by the existence of two separate service systems, one for mental health services and another for substance abuse treatment. Effectively blended community models for dual treatment of substance abuse and mental disorders often utilize a four-quadrant model of service delivery:

---

<sup>1</sup>Office of School Health, Safety and Nutrition, Nevada Department of Education. Youth Risk Behavior Surveillance Survey. December 2001.

**Co-occurring Disorders Continued**

- Quadrant I: Less severe mental health disorder/less severe substance abuse disorder
- Quadrant II: More severe mental health disorder/less severe substance abuse disorder
- Quadrant III: Less severe mental health disorder/more severe substance abuse disorder
- Quadrant IV: More severe mental health disorder/more severe substance abuse disorder

Quadrant IV is identified as the highest costing co-occurring treatment population in most communities due to: client chronicity in both substance abuse and mental health issues, recurrent crisis involving dual service deliveries for multiple non-completed episodes of care, and unstable housing leading to a precarious relationship with any system of care.

In the State of Nevada there are twenty-three funded substance abuse treatment providers being encouraged by BADA to develop a predominantly dual diagnosed capable service capacity (DDC-CD) and address the more persistent mentally ill and substance abuse dependent population represented in Quadrant IV, or rather, a dual-diagnosed enhanced setting (DDE-CD). It is important to note that Quadrant IV care delivery can be divided into two populations of clients to be served: *individuals already identified as seriously and persistently mentally ill with active substance abuse or dependence and a history of unstable engagement in services* or *individuals not identified as seriously and persistently mentally ill but whose substance dependence and psychiatric symptomatology are severe and persistent and their engagement in services is unstable*. The concept of *no wrong door* treatment strategy allows those suffering from persistent mental illness and chronic substance abuse disorders to engage in *seamless* treatment for co-occurring issues. At the center of care delivery for the dual diagnosed are the processes of continuous case management, care coordination of invested agencies, and stable housing.

National trends regarding the dual diagnosed population clearly reflect a need for improved service delivery. Key points continue to center around stigmatization in a continuum of care that can be easily and readily accessed multiple times. It is the driving principle of current Nevada providers that any person entering mental health care, substance abuse treatment, or primary care should be screened for mental disorders and substance abuse and then provided appropriate treatment. The following providers are integrating service delivery systems to achieve these goals.

<b>Program</b>	<b>Service Area</b>
Adelson Clinic	Las Vegas
Bridge Counseling	Las Vegas
Center for Independent Living	Las Vegas
Community Counseling Center	Las Vegas
Clark County Department of Family Services	Clark County
Economic Opportunity Board	Clark County
Nevada Treatment Center	Las Vegas
Salvation Army	Las Vegas

WestCare, Nevada, Inc.	Clark County
American Therapeutic Association	Reno
Bristlecone Family Resources	Washoe County
China Springs	Douglas County
Community Counseling Center	Carson City
Family Counseling Service	Reno
Lyon Council on Alcohol & Other Drugs	Lyon/Storey County
Mental Health & Developmental Services, Rural Clinics	Statewide
New Frontier	Fallon/Lovelock
Reno Spark Health & Human Services	Washoe County
Ridge House	Reno
Sierra Recovery	South Lake Tahoe
Step 2	Washoe County
Vitality Center, Inc.	Elko/Eureka/Humboldt/Lander Counties

In September and October 2003, BADA conducted a survey of funded providers to collect information on how the programs provide services to clients with co-occurring disorders. Sixteen providers responded to the survey.<sup>1</sup> Summary results from the survey are presented below:

- 88% reported providing services for clients with co-occurring disorders, 87% provided services to adults and 47% to adolescents.
- 73% provided a significant percent of their services to clients with the following diagnostic categories: delirium, dementia and other cognitive disorders; schizophrenia and other psychotic disorders; mood disorders; anxiety disorders; adjustment disorders including bipolar disorders; paranoid personality disorders, antisocial personality disorders; borderline personality disorder; and obsessive-compulsive personality disorder.
- Of these, 25% provided the mental health services in house, 37.5% provided services both in house and by referral and 37.5% only by referral.
- In house staffing consistent of the following types of professionals:
  - Medical Doctors (non-psychiatrist) – 31% for adults clients and 19% for adolescent clients
  - Psychiatrists – 37% for adult clients and 19% for adolescent clients
  - Clinical Psychologists – 19% for adult clients and 25% for adolescent clients
  - Clinical Social Workers – 37% for both adult and adolescent clients
  - Marriage and Family Therapists – 44% for adult clients and 37% for adolescent clients
  - Masters of Divinity – 25% for adult and adolescent clients

<sup>1</sup> The survey was not send to Mental Health and Developmental Services, Rural Clinics.

**Co-  
Occurring  
Disorders  
Continued**

- Forty-four percent of the respondents indicated that they provide medications for clients with co-occurring disorders.
- Respondents were asked to characterize their linkages with the publicly supported mental health system on a scale of 1 to 5; 1 being “None or Very Poor”, and 5

being “Excellent”. Fifty percent of the respondents rated their linkage with a publicly supported mental health system as “4” or “5”; 19% responded neutrally with a “3”; and 31% responded with a “1” or “2”.

- The top three challenges for providing care of these clients were:
  - One: Lack of access or availability
  - Two: Cost
  - Three: Stigma and issues about providing services for clients on Opioid Maintenance Therapy (Methadone)

**Trends**

**Adult Admission Trends Analysis**

There is a decrease in the number of adult admissions across the state in BADA funded substance abuse treatment programs, as indicated in the Bureau’s performance indicators. Although initially it may appear that this is a serious problem, it is partially reflective of the successful implementation of a number of treatment improvement initiatives started by the Bureau over the past three years. It also reflects the philosophical change to the public health model begun in 1999 when the Bureau was transferred into the State Health Division. The biggest change has been the recognition that substance abuse addiction is a chronic relapsing health condition requiring a more expansive strategy than traditionally supported. Additionally, it reflects the increasing number of adolescent treatment admissions.

The Bureau’s major treatment improvement initiatives include the following:

- Adoption of many recommendations contained in the national treatment plan, “Changing the Conversation,” created by the Substance Abuse and Mental Health Services Administration (SAMHSA) and BADA’s Treatment Strategic Plans
- Utilization of science/evidenced-based substance abuse treatment practices and models
- Improved implementation of the American Society of Addiction Medicine Patient Placement Criteria, second revision (ASAM PPC-2R)
- Funding of new levels of service and new programs not necessarily reflected in the Bureau’s Client Data System

A brief explanation of each item is presented below.

**Trends  
Continued**

**Successful application of the national treatment plan and BADA's Treatment**

**Strategic Plan:** The Bureau has been working for several years to improve the quality of substance abuse treatment services supported with public funds. In 2001, BADA created a series of strategic plans including several that address substance abuse treatment. BADA's plans are consistent with the national treatment plan developed by SAMHSA. All of these documents have formed the foundation for the changes that the Bureau has implemented in the past few years and will continue to promote for the next two to three years, until the

plans are updated. Central themes in these documents include the need to establish a seamless service system offering effective treatment based on individual needs, rather than a prescriptive treatment model applied equally to everyone. Also assumed is that in all systems of care, individuals enter and become engaged in the most appropriate type and level of substance abuse treatment and that they receive continuous services at the level(s) needed to enter into recovery. This moves beyond what has traditionally been thought of as "graduation" and aftercare.

**Utilization of science/evidenced-based substance abuse treatment practices and**

**models:** There is a somewhat inverse relationship between successful treatment completion and admission rates, in part, because successful treatment completion often means longer lengths of treatment engagement and there are several studies indicating the minimum effective length of treatment engagement is 90 days. Additionally, as programs develop service systems that better engage clients there is a decrease in the number of admissions. An example of this is the Bureau's concern over the high percentage of clients who enter and exit the system having only received detoxification services. Many of these clients have several repeat admissions, never really engaging in the treatment process. Such services delivery ultimately does nothing to improve the quality of the client's life and progress toward achieving recovery. Because the state has limited treatment capacity, if a program is successful at engaging the client in a longer treatment stay, the number of beds available statewide decline proportionately.

**Successful Implementation of ASAM PPC-2R:** ASAM is used to guide initial patient placement decisions and to help clients move through the treatment system. This results in better client engagement and retention as consumers move between levels of service, stepping down in treatment intensity as progress is made.

**Funding of new levels of service and new programs not necessarily reflected in the Bureau's Client Data System:** In order to foster the improved use of resources, a number of systems changes have been required in addition to those cited above. Included here are such things as support for care coordination and comprehensive evaluation services. Care coordination, in addition to supporting staff to help with case management, may include childcare, transportation, and translation services. Comprehensive evaluation was added as a funded level of service in order to help improve providers' ability to provide services to

**Trends  
Continued**

the sector of the population in need of substance abuse treatment services that also have a diagnosable mental illness.

Neither of these services are reflected in the Bureau's existing Client Data System, consequently, they are not reflected in the number of admissions causing incomplete data reporting. This is one of several reasons why the Bureau is replacing the existing data system. Additional services not reflected in the system include early intervention services and civil protective custody services. Furthermore, services provided by Sierra Recovery Center in South Lake Tahoe are not recorded into Nevada's data system because the program is located a few miles across the state line. SAMHSA requires that programs enter data into the state system where the program's headquarters are located.

**Health  
Insurance  
Coverage**

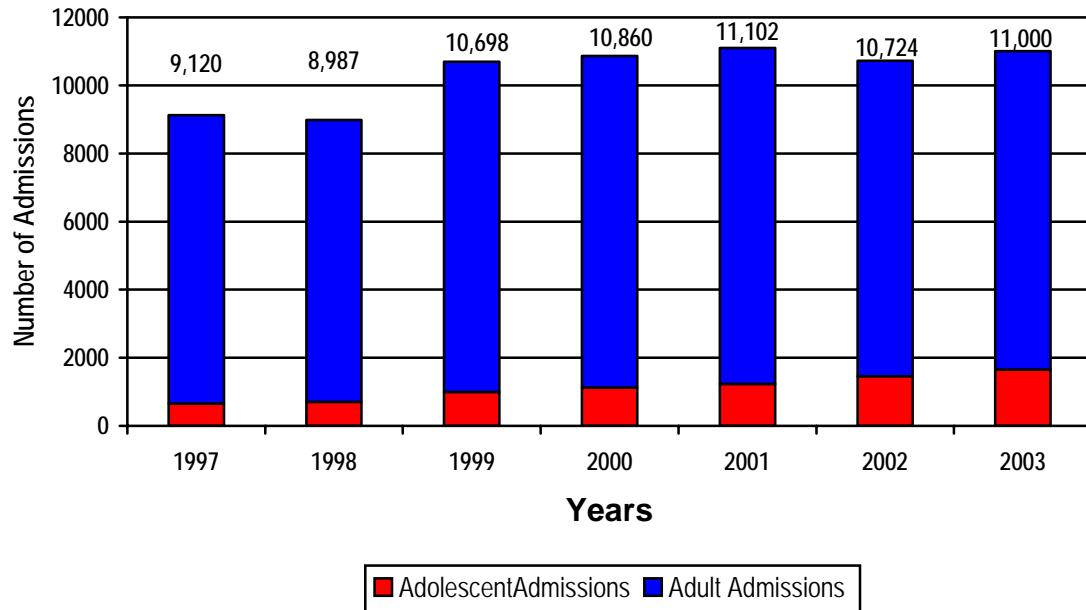

**Health Insurance Coverage**

The majority of clients seen in BADA funded substance abuse treatment programs have no private or public health insurance coverage. Over the past five years, this rate has varied little, 80% in 1997 to a high of 85% in 1999 to 82% in 2002. The chart on the following page contains the distribution of health insurance coverage in 2002.

**Health Insurance Coverage 2002**

### Bureau of Alcohol and Drug Abuse Admissions 1997 to 2003

### Summary of Number of Admissions for Treatment, 1999 - 2003

Calendar Year	Adolescent Admissions	Adult Admissions	Total Admissions
1997	658	8,462	9,120
1998	705	8,282	8,987
1999	995	9,703	10,698

## Prevention Overview

Prevention is defined as “a proactive process of helping individuals, families, and communities to develop the resources needed to develop and maintain healthy lifestyles”<sup>1</sup>. Prevention is broad based in the sense that it is intended to alleviate a wide range of at-risk behaviors including, but not limited to, alcohol, tobacco, and other drug abuse, crime and delinquency, violence, vandalism, mental health problems, family conflict, parenting problems, stress and burnout, child abuse, learning programs, school failure, school drop outs, teenage pregnancy, depression and suicide.

BADA has established a system whereby the Bureau purchases substance abuse prevention services. With this system, applicants are responsible for compliance with state and federal requirements for receipt of funding and are responsible for attaining service-delivery projections that are established in the subgrant scope of work.

Elements of the Bureau’s strategy are described below:

- Provide Nevadans access to quality substance abuse prevention services.
- Provide information regarding how many participants are being served as a result of bureau funding and the type of services provided.
- Develop an infrastructure to assist prevention providers in providing effective quality and quantity of services.
- Verify that State and Federal funds are being used to purchase services that achieve State and Federal goals and performance indicators.
- Require the assessment of priority risk and protective factor for individual communities.
- Enhance or expand collaboration with BADA funded substance abuse prevention coalitions.
- Require the assessment of individual communities in identifying target populations.
- Utilize the Center for Substance Abuse Prevention (CSAP) six strategies of substance abuse which include, Information Dissemination, Prevention Education, Alternative Activities, Problem Identification, Community Based Process and Environmental Programs.
- Support evidence based programs, best practices, and model programs. Programs must be based on research or prior program findings, which provide evidence that the programs will prevent or reduce substance use by youth.

## Prevention Accomplishments

- ✶ Forty-three primary substance abuse prevention programs and 11 community coalitions were funded in 2002 for a three-year project period. The programs

---

<sup>1</sup> International Certification and Reciprocity Consortium; IC&RC

**Prevention  
Accomplishments  
Continued**

received approximately \$2,000,000 for the current state fiscal year. For every dollar invested in substance abuse prevention seven dollars in savings are realized.<sup>1</sup>

- ✱ Funding from the Fund for a Healthy Nevada was obtained to support eight rural/frontier coalitions in implementing environmental tobacco reduction strategies utilizing youth oriented groups.
- ✱ Approximately 13,000 unduplicated individuals participated in BADA funded prevention programs for SFY 2003 and approximately 189,500 pieces of literature were distributed by BADA funded Clearinghouses statewide.
- ✱ Work was continued with community-based coalitions to develop local strategies and a statewide plan to address substance abuse prevention in a coherent and intelligent manner. BADA's coalition strategy also includes using the coalitions to increase provider capacity through a planning process, which includes grant writing and other resource development activities.
- ✱ In accordance with the 2001 Bureau Strategic Plan, BADA and its prevention partners developed standardized Program Operating and Procedures Standards.
- ✱ Further progress in the adoption of evidence/science-based programming assisted by a number of trainings including those provided at Nevada's Annual Summer Institute for Addiction and Prevention Studies in addition to 20 others including training in the Communities That Care Model.
- ✱ Under contract to BADA, the University of Nevada Research and Educational Planning Center Evaluation Team completed the third year of the Nevada Prevention Data Management System (PDMS) and implemented a web-based evaluation system to measure the effectiveness of BADA funded prevention services statewide.
- ✱ For FFY 2003, the final weighted non-compliance rate presented in the Synar report is 11.42% which is less than the target value of 20.00%. This is a reduction of 37.5% from the 2002 noncompliance rate of 18.26%, and a reduction of 46.2% from the 2001 noncompliance rate of 21.24%.
- ✱ Reported on two of the SAPT Block Grant's voluntary prevention outcome measures, Nevada is one of only seven states to report on the measures nationally in 2002.

**Need for  
Prevention  
Programs**

Substance abuse among high school students and adults alike present a problem in Nevada. Binge drinking has traditionally been higher in Nevada than the national average for both youth and adults (Youth Risk Behavior Survey, YRBS<sup>2</sup> and Behavioral Risk Factor

---

<sup>1</sup> "Principles of Effective Substance Abuse Prevention," published by the National Institute of Drug Addiction (NIDA), 1998.

<sup>2</sup> Centers for Disease Control and Prevention. Adolescent and School Health, Youth Risk Behavior Surveillance System - Youth 2001 Online.

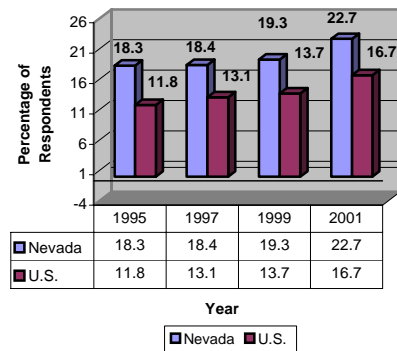

<<http://www.cdc.gov/nccdphp/dash/yrbs/2001/youth01online.htm>>

**Need for Prevention Programs Continued**

Surveillance Survey, BRFSS<sup>1</sup>). In 1999, nearly twice as many Nevada adults (8.7%) reported driving at least once in the past 30 days after having too much to drink compared to the national average of 4.6%, and 44.8% of all traffic fatalities in Nevada were alcohol related compared to the national average of 39.8%. Nearly 23% of Nevada respondents reported consuming alcoholic beverages over 15 days in the past 30 (BRFSS).

**Percentage of BRFSS Respondents Who Have Consumed Alcoholic Beverages Over 15 days in the Past Month**

While the overall rate of substance abuse is declining and the public intolerance of abuse is rising, there are some disturbing developments on the horizon. Adolescents are starting to use alcohol, tobacco, and illicit drugs at increasingly younger ages, and young adults, who are just beginning to assume more mature responsibilities in society, are more likely than other groups to drink heavily, smoke cigarettes, and use illicit drugs. Nevada youth have been affected by the availability of tobacco, alcohol, and drugs in the community, and in several instances, exceed the national averages for various behaviors reported in the YRBS. The link between alcohol and illicit drug use with

crime and aggressive behaviors is clearly visible in society today, therefore two negative behaviors are reduced by effective prevention programs.

Identifying high risk and substance abusing individuals before they progress to dependence is essential to reducing future chronic alcohol and drug abuse cases and can greatly reduce the fiscal impact of alcohol and drug abuse treatment. Many of these individuals could benefit from Brief Intervention programs that have the potential to prevent the escalation of substance abuse to substance dependence. Early identification, intervention, and referral for substance abuse can reduce tremendous psychological and financial burdens on the individual, family, and community. In addition, the fiscal impact on the criminal justice system, health care system, and drug abuse treatment programs will be positively impacted by early identification of substance abuse problems.

**Prevention Data Mgmt. System (PDMS)**

The Prevention Data Management System (PDMS) is a web-based evaluation system used to collect, analyze and report survey data provided by prevention program participants. BADA has contracted with University of Nevada, Reno (UNR) to develop and manage the system. Program findings offer service providers data concerning the effectiveness of their programs and statistics suggesting areas of needed improvement. Additionally, the data is

<sup>1</sup> Centers for Disease Control and Prevention. Behavioral Risk Behavior Surveillance System – Prevalence Data 1995-2002. <<http://apps.nccd.cdc.gov/brfss/index.asp>>

**PDMS  
 Continued**

useful for making better-informed decisions on how money can best be spent so as to maximize benefits at current funding allocation levels.

The table below provides unduplicated participants in BADA funded prevention programs statewide as collected by the Nevada Prevention Data Management System (PDMS) and information on the number of items of literature distributed by the state clearinghouse system. As can be seen in the table, the number of children and families being served is increasing

**Clients Served and Literature Distributed, 2001 to 2003<sup>1</sup>**

Deliverable	FY 2001		FY 2002*		FY 2003	
	Children	Adults	Children	Adults	Children	Adults
Individuals Served	8,000	2,884	7,999	2,600	10,276	2,815
Literature Distributed**	76,000		80,000		189,508	

Notes:

\* Fiscal year 2002 was an abbreviated grant year covering a 10-month period.

\*\* Represents north and south centers.

**Coalition  
 Building**

Ten (10) community-based coalitions have been awarded subgrants to develop and implement a research-based operating system called Communities That Care (CTC) in fourteen (13) counties in Nevada. CTC guides coalitions through a process of community mobilization and data gathering for the purpose of developing community needs assessments and comprehensive community substance abuse prevention plans.

Community coalitions strive to include a broad representation of individuals and organizations from their communities. Coalition representatives received six intensive days of training on the CTC model and were awarded funds to conduct or participate in the following activities in their communities:

- Facilitate regularly scheduled coalition meetings at the community level.
- Assess the community's level of readiness to implement a substance abuse prevention plan.
- Collect existing data to compile a community needs assessment.
- Using their community needs assessment data; prioritize risk factors to be focused on within their communities.

<sup>1</sup> Tables fiscal years based on BADA prevention fiscal years, September 1, 1999 through August 30, 2000, September 1, 2000 through August 30, 2001, September 1, 2001 through June 30, 2002 (abbreviated grant cycle to align BADA prevention fiscal year with State fiscal year), and fiscal year, July 1, 2002 through June 30, 2003.

**Coalition  
Building  
Continued**

- Conduct a resource assessment to determine gaps in services in the community. This assessment will determine where the community should direct their focus of programming.
- Use community assessment information and current research to develop a comprehensive community substance abuse prevention plan.
- Participate in the evaluation of coalitions.

**Safe and  
Drug Free  
Schools**

As the Single State Agency for substance abuse prevention and treatment activities in Nevada, the State Health Division (BADA) has been designated by the Governor to receive and administer his portion of the Safe and Drug Free Schools funding. BADA manages these funds in keeping with the substance abuse prevention program principles.

In an effort to provide comprehensive technical assistance to organizations receiving Safe and Drug Free School funds, support and technical assistance are provided in the areas of fiscal policies, program operating standards, science-based programming, workforce development, risk and protective factor analysis, target population and environmental issues, community development, evaluation, and other areas as required. In addition, BADA staff, along with the University of Nevada, form the nucleus of the state evaluation team, whose purpose is to evaluate the effectiveness and impact of prevention strategies and program outcomes of funded prevention programs. It is also important to note that a new requirement resulting from the No Child Left Behind federal legislation has introduced the requirement to prepare a joint state application for federal education funds, thereby increasing the level of coordination between the Nevada Department of Education and BADA to ensure programmatic and fiscal initiatives complement each other.

**State  
Incentive  
Grant  
(SIG)**

The State of Nevada has also been awarded a State Incentive Grant (SIG) that is providing \$3,000,000 per year for three years to facilitate the development of 14 local coalitions in 11 geographic areas and three special populations (Latino in Northern Nevada, Latino in Southern Nevada and Statewide Native American). This funding supports coalition infrastructure development, development of a comprehensive prevention system, and funding for primary prevention services statewide. The coalitions funded serve as regional prevention centers to develop and implement local comprehensive community prevention plans, and to identify and fund evidence-based programs that will fill service gaps without duplicating existing services.

The purpose of Nevada's SIG is to reduce the use of alcohol, tobacco, and other drugs (ATOD) among Nevada's 12 to 25 year old youth by reinventing the system for delivering prevention services through: (1) coordinating prevention services statewide and (2) implementing prevention programs based on sound scientific research. Improving the ATOD prevention system has both long-term and short-term objectives. Statewide

**SIG  
Continued**

measures will indicate reductions in illicit drug use, marijuana use, and binge drinking among 12 to 25 year olds plus a delaying of the age of first use of marijuana and alcohol.

The long-term changes (4 to 10 years) will be included in a Comprehensive Prevention Plan prepared by the SIG Advisory Committee. Chances for long-term changes are greatly enhanced because Nevada intends to redirect other ATOD prevention funds to support the goals of its State Incentive Grant.

The short-term changes (1 to 3 years) will be accomplished through three mechanisms on the local level: (1) enhancing local substance abuse prevention capacity, (2) leveraging existing prevention dollars from various sources, and (3) replacing ineffective ATOD prevention programming with science-based prevention programs. This vision is for local ATOD prevention coalitions to make the program decisions and monitor their effectiveness. The SIG allows Nevada to implement this vision in three years by supporting crucial capacity building.

A team from BADA, with the assistance of staff from the Pacific Institute for Research and Evaluation (PIRE), the project evaluators manage the Nevada SIG. Governor Kenny Guinn appointed the 20 members of the Nevada State SIG Advisory Committee and is directly involved in this effort through staff of the Governor's Office and numerous government administrators he appointed. This committee includes representation from; the Governor's Office, state legislature, the Attorney General's Office, the State Division of Child and Family Safety, the Governor's Youth Advisory Committee, the State Health Division, the State Department of Education, Community Agencies, Tribal Governments, Faith organizations, the Nevada Association of Counties, and the State Board of Health.

**Fund for  
a Healthy  
Nevada  
Tobacco  
Prevention  
Project**

BADA received funds through *The Fund for a Healthy Nevada* to implement environmental approaches to tobacco prevention that local coalitions can adapt to meet the needs of their specific communities. The goal of this project is to impact policies, community norms, and media advertising of tobacco in order to prevent youth access and exposure to tobacco. This program encompasses all northern and rural/frontier Nevada communities. The coalitions work with local youth groups to plan, organize, monitor, and evaluate prevention approaches implemented in the community. Through these funds, eight rural coalitions collectively received \$400,000 of tobacco settlement money (for SFY2003 & 2004; \$200,000 / year) to develop environmental prevention strategies addressing tobacco usage. Eleven treatment providers were also collectively awarded

\$4,397,486 (directly from the fund) for cessation programs to be expended over a four-year period (for SFY 2001 through SFY 2004).

BADA currently subcontracts with the Research and Education Planning Center (REPC) at the University of Nevada, Reno to evaluate BADA funded primary substance abuse prevention programs and coalitions statewide. BADA has contracted with the REPC to

**Fund for  
a Healthy  
Nevada  
Continued**

create a new web-based evaluation system to measure the outcomes from the PEPS both quantitatively and qualitatively. This new evaluation component will be combined with the existing Coalition Evaluation Tool and the Prevention Data Management System (PDMS).

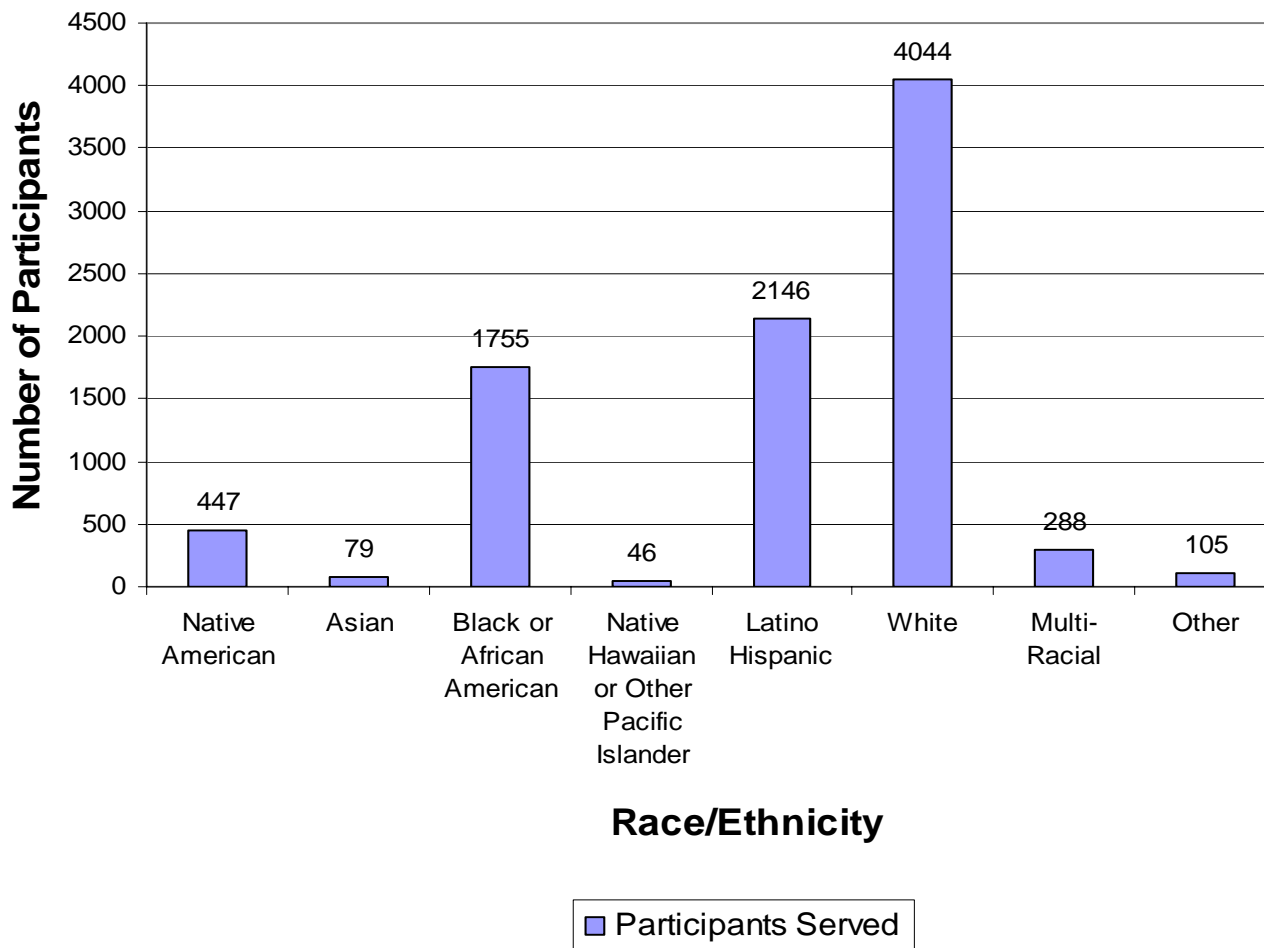

**Synar  
Program**

The Synar amendment was named after Mike Synar, a U.S. Congressman, who represented Oklahoma from 1979 to 1994. This amendment was passed by Congress in 1992, and requires each state to enforce an effective law prohibiting the sale of tobacco products to minors less than eighteen years of age. The Synar regulation is administered by the Substance Abuse and Mental Health Services Administration (SAMHSA). States not enforcing youth tobacco laws could lose up to 40% of their Substance Abuse Prevention and Treatment Block Grant. The Synar rule entitled *Substance Abuse Prevention and Treatment Block Grants: Sale and Distribution of Tobacco Products to Individuals Under 18 Years of Age*, was released in 1996 and requires states to:

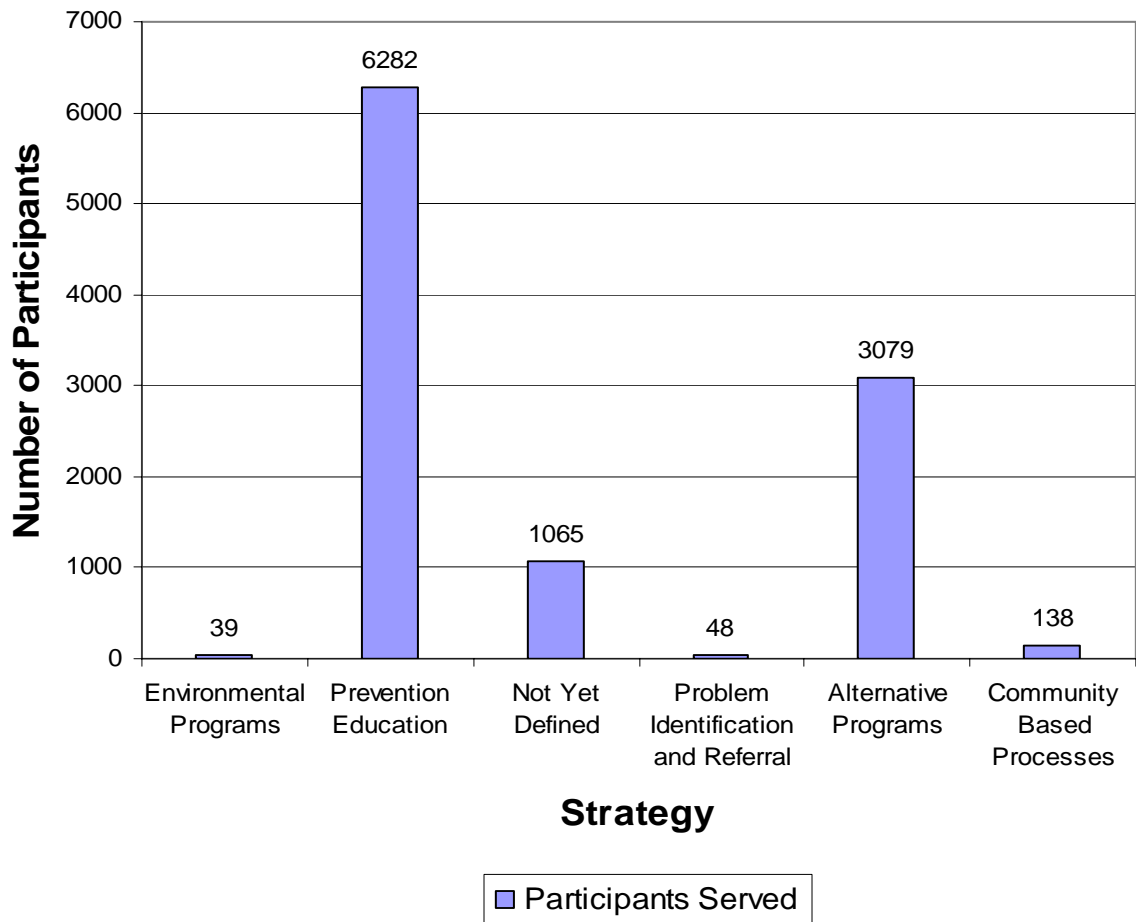

- Have in effect a law prohibiting any manufacturer, retailer, or distributor of tobacco products from selling or distributing such products to any individual under the age of 18.
- Enforce such laws in a manner that can reasonably be expected to reduce the extent to which tobacco products are available to individuals under the age of 18.
- Conduct annual random, unannounced inspections of retail outlets to ensure compliance with the law. These inspections are to be conducted in such a way as to provide a valid sample of outlets accessible to youth.
- Develop a strategy and time frame for achieving an inspection failure rate of less than 20% of outlets accessible to youth.
- Submit an annual report that details: the State's activities to enforce their laws, the overall success achieved by the State during the previous fiscal year in reducing tobacco availability to youth, inspection methodology, methods used to identify outlets, and plans for enforcing the law in the coming fiscal year.

BADA administers the Synar program, and provides funds to the Attorney General's Office for the Synar enforcement. The practice of conducting compliance checks, at each location accessible to minors, at least twice a year has made this program more visible to the public and noncompliance rates for Nevada have been declining.
